

## POLE – WALL MOUNTED BIN Type “BRAVO” - Metal

1. Single installation

2. Double installation

3. Triple installation

Metal container + Grounded pole  
Flanged pole

The bravo bin is offered as a combination of one, two or three bins on a single pole or as separate items. Every bin is provided with its own fixing.

The BRAVO bin can be mounted on pole or wall.

In case of pole mounting, the pole is offered with or without flange. In the first case it is concreted in the ground and the second case it is bolted on the floor.

The bin is mounted in 3 optional combinations, either to extend its refuse capacity or to use it for recycling purposes.

The BRAVO bin is made in 2 parts.

The first part is the cylindrical bin  $\Phi 300 \times 550$ mm with a capacity of 35 liters which is permanently fixed either on pole or wall.

The second part is the collar that holds and hides the plastic bags used for the collection of the refuse. The collar remains in position via 2 side springs.

The construction of the bin is from pressed galvanized steel sheet of 2mm thickness.

For extra strength, the main cylinder is ribbed to a depth of 2mm at intervals of 50mm.

The bin is then electrostatically coated with polyester powder and polymerized at a temperature of 200 °C.
